www.abovalve.com

# GENERAL VALVE DESCRIPTION

## **Czech Industrial Valve Manufacturer**

## ABO valve **VALVE MODELS** B Т B Т WAFER WAFER LUG LUG DESIGN DESIGN DESIGN DESIGN **Standard line** DN50-DN400 **Bi-directional** line (RS design) DN50-DN600 **DN50-DN125 DN150-DN600**

## Advantages of double offset valves

- split stem allows higher Kv/Cv values
- lower pressure loss
- guaranteed tightness in both directions at nominal working pressure (RS version)
- sealing ring and seat come to contact only nearly after the valve is entirely shut low closing torque
- the seal guarantees perfect upper stem tightness
- water and air tightness
- actuator connection can be done by bracket or the stem can be extended if connected to special actuator types

## **Quality control**

- ABO valve production facilities are certified in accordance with ISO 9001:2015 (14001, 45001) quality control standards
- tightness test procedures according to standards EN 12266-1, ISO 5208, ANSI/FCI 70-2, API598
- production in accordance with the Pressure Equipment Directive 2014/68/EU (Module H)
- the possibility of issuing inspection certificate 3.1, 3.2
- all the actuators are adjusted and tested while assembled
- all the certificates can be downloaded at www.abovalve.com

into the ambient air (upon request)

## **One piece design**

flow rate

# DESIGN ADVANTAGES

## **Double offset**

- the double offset design provides a safe function and tightness even after a sudden temperature or pressure change. It reduces seat wear and ensures perfect tightness. The first offset (1) shifts the axis of the rotation off the sealing surface and thus provides tightness between the seat and the sealing ring around the entire disc circumference. The second offset (2) moves the the axis of the disc rotation off the valve (pipeline) axis and thus releases the ring from the seat after a few degrees of opening movement. The reason of the second offset is to quickly relieve the seal from compression between the disc and the seat.
- the design extends the seal lifetime and the torques are lower. When shutting valve, the rotating movement is changed to the linear one and the disc is effectively pressed into the seal. The design also prevents undesirable agglomerating e.g. undissolved substances in the area of disc and seal contact.

2

- (1) stem axis
- is off the sealing surface (2) - stem offset off the pipeline axis

## Stem and seal (3)

- two-piece stem thanks to the split stem the valve attains higher values of Kv/Cv and related low pressure loss
- adjusting seal according to the customers' requirements the seal can be tightened to the parameters prescribed by customers. Thus maximum tightness can be achieved around the stem and the actuation torque for low-pressure applications can be decreased.
- adjustable seal enables easy access to final adjustment of the seal without dismantling the actuator
- stem assembly upper and lower bushings made from TP Igus provides high abrasion resistance and prolongs valve lifespan
- 3
- extended neck enables to insulate piping incl. the valve
- easy service and seal replacement easy assembly and replacement
- top flange according to ISO 5211 enables to directly install a manual handle or an actuator

## **Seal design**

- R-PTFE suitable seal geometry ensures full tightness and a high number of cycles. The PTFE seal is reinforced with 25% glass fibres, reducing wear and and increasing valve thermal stability. Longer lifespan of the valve and lower maintenance demand are guaranteed.
- **end-stops** are designed to avoid overruning the maximum allowable position of the disc. Thus the seal is not damaged nor overloaded and the valve lifespan is extended **(4)(5)**.

DN50-DN400

## 6 / ABO valve Czech

# PRESSURE AND TEMPERATURE CURVES **ABO** valve

# **VALVE ACTUATION**

Valve Manufacurer

All the ABO valves can be equipped with hand levers (up to DN150), worm gears, pneumatic and electric actuators. The upper flange design according to the standard ISO 5211 enables to directly assemble actuators on valves.

### Handlever

For manual actuation ABO valve offers carbon steel lever suitably painted to improve resistance to corrosion and abrasion. Stainless lever on request. Top flange connection according to ISO standards F07 for DN50 to DN125 and F10 for DN150. Controlled lever on request. The levers can be equipped with a padlock to ensure an optimized position, can be equipped with end position sensors.

# 

## Worm gear with handwheel

Manual gearbox housing is made from cast iron with suitable surface treatment and protection degree class IP 67. Self-locking design of the worm gear enables both to adjust basic positions open/shut and to control (throttle) media flow. The worm gearbox is simply actuated by means of a handwheel of a suitable diameter. End-limit positions of the worm gearbox are set by means of stop screws. The gearbox can be equipped with a lockable system secured by a padlock. Another way how to handle worm gearbox is using a chain. The worm gearbox as well as the hand lever can be completed with end-limit position sensors.

## Actuators

### **Pneumatic actuators**

Pneumatic actuators ABO Series 95 can be assembled to valves in two options: single-acting or double-acting.

### **Electric actuators**

Electric actuators ABO Series 97 are designed quarter-turn. Electric actuators can be installed on ABO valves for voltages of 24 V, 230 V or 400 V.

### **Special actuators types**

Valves are equipped with special actuator types from major world suppliers (Auma, Regada, Valpes, etc.).

# **BIDIRECTIONAL TIGHTNESS / -RS-**VERSION (DN50-DN600)

WAFER

DESIGN

**Czech Industrial Valve Manufacurer** 

Butterfly valves of 2E series (RS version) are delivered in nominal sizes of DN50 to DN600. Their make provides bidirectional tightness of the valve. On the circumference the valve is sealed with a special RTFE seal filled with 25% glass fibres and silicone filling.

### **Body material:**

- carbon steel 1.0625 (A216 WCB) / 1.0425 (P265 GH)
- low carbon steel 1.1156 (A352 LCC) / 1.0566 (P355 NL1)
- stainless steel 1.4409 (CF3M) / 1.4401 (AISI 316)

## **Disc material:**

- DN50-DN125: stainless steel 1.4409 (ASTM A351 CF3M) DN150-600:
- 55xx: stainless steel 1.4027 (ASTM CA-40) 54xx, 56xx: stainless steel 1.4408 (ASTM A351 CF8M)

## **Valve features**

- bidirectional tight and control butterfly valve with all-stainless disc
- double offset design
- sizes DN50 to DN600
- tightness class A (EN 12266-1)
- better flow rate due to split stem
- the seat is adapted to large temperature changes
- delivered for manual, electric or pneumatic control
- suitable for heat and power plants, steam and hot water pipework systems
- the valves may be delivered with a special surface protection
